Model Categories (Mathematical Surveys and Monographs) Mark Hovey
[The book] starts with an account of the definitions, and a development of the homotopy theory of model categories. This is probably the first time in which the important notion of cofibrant generation has appeared in a book, and the consideration of the 2-category of model categories and Quillen adjunctions is another interesting feature. --Bulletin of the London Mathematical Society Model categories are used as a tool for inverting certain maps in a category in a controllable manner. As such, they are useful in diverse areas of mathematics. The list of such areas is continually growing. This book is a comprehensive study of the relationship between a model category and its homotopy category. The author develops the theory of model categories, giving a careful development of the main examples. One highlight of the theory is a proof that the homotopy category of any model category is naturally a closed module over the homotopy category of simplicial sets. Little is required of the reader beyond some category theory and set theory, which makes the book accessible to advanced graduate students. The book begins with the basic theory of model categories and proceeds to a careful exposition of the main examples, using the theory of cofibrantly generated model categories. It then develops the general theory more fully, showing in particular that the homotopy category of any model category is a module over the homotopy category of simplicial sets, in an appropriate sense. This leads to a simplification and generalization of the loop and suspension functors in the homotopy category of a pointed model category. The book concludes with a discussion of the stable case, where the homotopy category is triangulated in a strong sense and has a set of small weak generators.

From reader reviews:

Davis Miller:

Why don't make it to become your habit? Right now, try to ready your time to do the important take action, like looking for your favorite book and reading a publication. Beside you can solve your problem; you can add your knowledge by the book entitled Model Categories (Mathematical Surveys and Monographs). Try to stumble through book Model Categories (Mathematical Surveys and Monographs) as your friend. It means that it can being your friend when you experience alone and beside those of course make you smarter than before. Yeah, it is very fortuned for you personally. The book makes you a lot more confidence because you can know everything by the book. So , we should make new experience as well as knowledge with this book.

Curtis Hernandez:

As people who live in the particular modest era should be up-date about what going on or data even knowledge to make them keep up with the era which is always change and make progress. Some of you maybe will probably update themselves by reading books. It is a good choice for you personally but the problems coming to anyone is you don't know what one you should start with. This Model Categories (Mathematical Surveys and Monographs) is our recommendation to make you keep up with the world. Why, because book serves what you want and wish in this era.

Donald Noble:

The publication untitled Model Categories (Mathematical Surveys and Monographs) is the e-book that recommended to you to learn. You can see the quality of the book content that will be shown to anyone. The language that writer use to explained their ideas are easily to understand. The writer was did a lot of analysis when write the book, hence the information that they share to you is absolutely accurate. You also could get the e-book of Model Categories (Mathematical Surveys and Monographs) from the publisher to make you more enjoy free time.

Georgia Yorke:

In this period of time globalization it is important to someone to find information. The information will make a professional understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. The book that recommended to you personally is Model Categories (Mathematical Surveys and Monographs) this book consist a lot of the information in the condition of this world now. This specific book was represented just how can the world has grown up. The vocabulary styles that writer value to explain it is easy to understand. The writer made some exploration when he makes this book. Honestly, that is why this book appropriate all of you.
