Evolutionary robotics is a new technique for the automatic creation of autonomous robots. Inspired by the Darwinian principle of selective reproduction of the fittest, it views robots as autonomous artificial organisms that develop their own skills in close interaction with the environment and without human intervention. Drawing heavily on biology and ethology, it uses the tools of neural networks, genetic algorithms, dynamic systems, and biomorphic engineering. The resulting robots share with simple biological systems the characteristics of robustness, simplicity, small size, flexibility, and modularity.

In evolutionary robotics, an initial population of artificial chromosomes, each encoding the control system of a robot, is randomly created and put into the environment. Each robot is then free to act (move, look around, manipulate) according to its genetically specified controller while its performance on various tasks is automatically evaluated. The fittest robots then "reproduce" by swapping parts of their genetic material with small random mutations. The process is repeated until the "birth" of a robot that satisfies the performance criteria.

This book describes the basic concepts and methodologies of evolutionary robotics and the results achieved so far. An important feature is the clear presentation of a set of empirical experiments of increasing complexity. Software with a graphic interface, freely available on a Web page, will allow the reader to replicate and vary (in simulation and on real robots) most of the experiments.

From reader reviews:

Rita Carter:

The book Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) give you a sense of feeling enjoy for your spare time. You can utilize to make your capable far more increase. Book can for being your best friend when you getting strain or having big problem with your subject. If you can make studying a book Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) to be your habit, you can get a lot more advantages, like add your own capable, increase your knowledge about many or all subjects. It is possible to know everything if you like open and read a guide Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents). Kinds of book are several. It means that, science publication or encyclopedia or others. So, how do you think about this publication?

Willie McCall:

The book Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) can give more knowledge and information about everything you want. So just why must we leave the best thing like a book Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents)? Several of you have a different opinion about e-book. But one aim that book can give many data for us. It is absolutely proper. Right now, try to closer with the book. Knowledge or facts that you take for that, you could give for each other; it is possible to share all of these. Book Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) has simple shape nevertheless, you know: it has great and big function for you. You can search the enormous world by wide open and read a guide. So it is very wonderful.

Emily Boyd:

Are you kind of stressful person, only have 10 as well as 15 minute in your morning to upgrading your mind talent or thinking skill also analytical thinking? Then you are experiencing problem with the book than can satisfy your short period of time to read it because all this time you only find reserve that need more time to be learn. Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) can be your answer since it can be read by an individual who have those short extra time problems.

Cheryl Saldana:

In this period globalization it is important to someone to acquire information. The information will make someone to understand the condition of the world. The condition of the world makes the information quicker

to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can view that now, a lot of publisher that will print many kinds of book. The book that recommended to you is Evolutionary Robotics: The Biology, Intelligence, and Technology of Self-Organizing Machines (Intelligent Robotics and Autonomous Agents) this guide consist a lot of the information of the condition of this world now. This particular book was represented how do the world has grown up. The vocabulary styles that writer require to explain it is easy to understand. Often the writer made some exploration when he makes this book. That is why this book suited all of you.
