Electrodynamics of Continua II: Fluids and Complex Media

A.Cemal Eringen, Gerard A. Maugin

Electrodynamics of Continua II: Fluids and Complex Media A.Cemal Eringen, Gerard A. Maugin

This is the second volume of a two-volume set presenting a unified approach to the electrodynamics of continua, based on the principles of contemporary continuum of physics. The first volume was devoted mainly to the development of the theory and applications to deformable solid media. This volume extends the developments of the first volume to richer and newer grounds. It contains discussions on fluid media, magnetohydrodynamics, eletrohydrodynamics and media with more complicated structures. With the discussion, in the last two chapters, of memory-dependent materials and non-local E-M theory, the authors account for the nonlocal effects arising from motions and fields of material points at past times and at spatially distant points. This discussion is included here to stimulate further research in these important fields, which are presently in development stages. The second volume is self-contained and can be studied without the help of volume I. A section summarizing the constitutive equations and the underlying physical ideas, which were presented in more detail in the first volume, is included. This volume may be used as a basis for several graduate courses in engineering schools, applied mathematics and physics departments. It also contains fresh ideas and will stimulate further research in the directions the authors outline.

From reader reviews:

Vera Forde:

Have you spare time to get a day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity regarding spend your time. Any person spent all their spare time to take a walk, shopping, or went to the Mall. How about open as well as read a book titled Electrodynamics of Continua II: Fluids and Complex Media? Maybe it is to get best activity for you. You know beside you can spend your time using your favorite's book, you can smarter than before. Do you agree with it has the opinion or you have various other opinion?

Allison Walters:

In this 21st one hundred year, people become competitive in each and every way. By being competitive today, people have do something to make these individuals survives, being in the middle of the particular crowded place and notice by surrounding. One thing that often many people have underestimated this for a while is reading. Yeah, by reading a guide your ability to survive enhance then having chance to stand than other is high. For you personally who want to start reading some sort of book, we give you this Electrodynamics of Continua II: Fluids and Complex Media book as nice and daily reading e-book. Why, because this book is usually more than just a book.

Carolyn Berndt:

Spent a free time and energy to be fun activity to perform! A lot of people spent their free time with their family, or their own friends. Usually they accomplishing activity like watching television, likely to beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Do you want to something different to fill your own free time/ holiday? May be reading a book is usually option to fill your no cost time/ holiday. The first thing that you'll ask may be what kinds of book that you should read. If you want to try look for book, may be the book untitled Electrodynamics of Continua II: Fluids and Complex Media can be very good book to read. May be it can be best activity to you.

Carolyn Lew:

This Electrodynamics of Continua II: Fluids and Complex Media is fresh way for you who has curiosity to look for some information given it relief your hunger details. Getting deeper you onto it getting knowledge more you know or else you who still having bit of digest in reading this Electrodynamics of Continua II: Fluids and Complex Media can be the light food to suit your needs because the information inside this kind of book is easy to get through anyone. These books create itself in the form that is certainly reachable by anyone, that's why I mean in the e-book web form. People who think that in publication form make them feel sleepy even dizzy this reserve is the answer. So you cannot find any in reading a guide especially this one. You can find what you are looking for. It should be here for a person. So , don't miss the item! Just read this e-book type for your better life in addition to knowledge.
