Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) Michael A. Libermann, Alexander L. Velikovich

As Emile Jouguet remarked, "the shock wave flew off the tip of the pen of a theoretician for the first time" about a hundred years ago. The physics of shock waves has since grown into an independent branch of science closely linked with a wide range of research areas, from astrophysics and plasma physics to solid-state physics. Since the beginning, theoretical investigation has kept its leading role. The present book is devoted to actual problems of the theory of shock waves in gases and plasmas, that are of general interest to physicists. It contains the results of studies on shock structure, stability, evolutionarity and dynamics. Of special interest is the theory of shock phenomena in magnetic fields, which is important for applied research on controlled nuclear fusion. A substantial contribution to this theory has been made by these authors. This monograph is the first attempt in the literature to make a systematic presentation of the shock-structure theory. The theory is consistently substantiated by relevant experimental results obtained recently with the use of high-power electromagnetic shock tubes. The material contained here is applicable to the solution of a wide variety of problems arising in plasma physics, nuclear fusion and cosmic gasdynamics. I believe that this book will be of help and interest for a broad circle of research workers (physicists, astrophysicists and engineers concerned with energy accumulation, shock phenomena and other related problems of plasma hydrodynamics) as well as for university staff, post- and undergraduates.

From reader reviews:

Daphne Shew:

This Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) book is not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is information inside this book incredible fresh, you will get info which is getting deeper you actually read a lot of information you will get. This specific Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) without we comprehend teach the one who reading through it become critical in thinking and analyzing. Don't end up being worry Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) can bring any time you are and not make your bag space or bookshelves' come to be full because you can have it with your lovely laptop even telephone. This Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) having great arrangement in word in addition to layout, so you will not sense uninterested in reading.

Levi Ryan:

Why? Because this Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) is an unordinary book that the inside of the publication waiting for you to snap that but latter it will jolt you with the secret the idea inside. Reading this book alongside it was fantastic author who all write the book in such incredible way makes the content inside of easier to understand, entertaining way but still convey the meaning fully. So , it is good for you for not hesitating having this ever again or you going to regret it. This excellent book will give you a lot of advantages than the other book include such as help improving your skill and your critical thinking technique. So , still want to postpone having that book? If I were you I will go to the book store hurriedly.

Gretchen Meehan:

Do you have something that that suits you such as book? The reserve lovers usually prefer to opt for book like comic, quick story and the biggest you are novel. Now, why not trying Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) that give your satisfaction preference will be satisfied by simply reading this book. Reading addiction all over the world can be said as the way for people to know world a great deal better then how they react to the world. It can't be mentioned constantly that reading addiction only for the geeky particular person but for all of you who wants to possibly be success person. So , for all of you who want to start reading as your good habit, you can pick Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics) become your current starter.

Billy Migliore:

What is your hobby? Have you heard that question when you got students? We believe that that question was given by teacher to their students. Many kinds of hobby, All people has different hobby. So you know that little person similar to reading or as examining become their hobby. You must know that reading is very

important as well as book as to be the matter. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You see good news or update about something by book. Amount types of books that can you go onto be your object. One of them is this Physics of Shock Waves in Gases and Plasmas (Springer Series in Electronics and Photonics).
