Pioneering Women in Plant Pathology Jean Beagle Ristiano

Pioneering Women in Plant Pathology is a biographical book on the early women scientists who led the way for others in the field of plant pathology. These untold stories about 27 fascinating women discuss their struggles and triumphs as early women in the science.

With contributions from 37 talented writers and more than 130 figures, we are given a true picture of the challenges these women faced on their way to important discoveries. The authors do a wonderful job presenting the scientific achievements of these women in the context of their time. We also get glimpses into the character of these women that show us how their personal attributes and talents helped them achieve great things.

This will be a great read for any of the women of plant pathology today and also the men who work beside them. As a historical book, it will be appropriate for introductory or graduate level plant pathology courses that teach about the early studies of plant disease. Women s studies, agriculture, and science history classes could also use this as a supplementary text. Historians of science will also find this an interesting look into the past.

The 27 wonderful stories in the book are enhanced by historical documentation, samples of original research and published articles, reference material, and printed historical accounts. With APS turning 100 in 2008, it is fitting that this book arrived to help commemorate plant pathology s important contributions during the Society s centennial celebration year.
