The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics

James D Louck, Myron L Stein*

The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics James D Louck, Myron L Stein*

This monograph develops chaos theory from properties of the graphs inverse to the parabolic map of the interval $[0, 2]$, where the height at the midpoint $x = 1$ may be viewed as a time-like parameter, which together with the x -coordinate, provide the two parameters that uniquely characterize the parabola, and which are used throughout the monograph. There is only one basic mathematical operation used: function composition. The functions studied are the n -fold composition of the basic parabola with itself. However, it is the properties of the graph inverse to this n -fold composition that are the objects whose properties are developed. The reflection symmetry of the basic parabola through the vertical line $x = 1$ gives rise to two symmetry classes of inverse graphs: the inverse graphs and their conjugates. Quite remarkably, it turns out that there exists, among all the inverse graphs and their conjugates, a completely deterministic class of inverse graphs and their conjugates. Deterministic in the sense that this class is uniquely determined for all values of the time-like parameter and the x -coordinate, the entire theory, of course, being highly nonlinear — it is polynomial in the time-like parameter and in the x -coordinate. The deterministic property and its implementation are key to the argument that the system is a complex adaptive system in the sense that a few axioms lead to structures of unexpected richness.

This monograph is about working out the many details that advance the notion that deterministic chaos theory, as realized by a complex adaptive system, is indeed a new body of mathematics that enriches our understanding of the world around us. But now the imagination is also opened to the possibility that the real universe is a complex adaptive system.

From reader reviews:

Thomas West:

Why don't make it to be your habit? Right now, try to ready your time to do the important take action, like looking for your favorite e-book and reading a e-book. Beside you can solve your problem; you can add your knowledge by the guide entitled The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics. Try to stumble through book The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics as your close friend. It means that it can to be your friend when you experience alone and beside regarding course make you smarter than in the past. Yeah, it is very fortunated to suit your needs. The book makes you a lot more confidence because you can know almost everything by the book. So , let's make new experience and knowledge with this book.

Jessie Loudermilk:

What do you with regards to book? It is not important with you? Or just adding material if you want something to explain what the ones you have problem? How about your time? Or are you busy particular person? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Every person has many questions above. They need to answer that question due to the fact just their can do this. It said that about publication. Book is familiar in each person. Yes, it is right. Because start from on jardín de infancia until university need this specific The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics to read.

Daniel Caudle:

Reading can called brain hangout, why? Because while you are reading a book specifically book entitled The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics your thoughts will drift away trough every dimension, wandering in most aspect that maybe mysterious for but surely will become your mind friends. Imaging each word written in a book then become one type conclusion and explanation that maybe you never get before. The The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics giving you another experience more than blown away your mind but also giving you useful details for your better life in this particular era. So now let us demonstrate the relaxing pattern here is your body and mind is going to be pleased when you are finished studying it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

Margaret Phillips:

Guide is one of source of expertise. We can add our information from it. Not only for students but also native or citizen want book to know the revise information of year to help year. As we know those books have many advantages. Beside we all add our knowledge, could also bring us to around the world. From the book The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics we can consider more advantage. Don't you to be creative people? To become creative person must want to read a book. Only choose the best

book that ideal with your aim. Don't always be doubt to change your life at this book The (1+1)-Nonlinear Universe of the Parabolic Map and Combinatorics. You can more desirable than now.
