Forest Conservation in the Anthropocene: Science, Policy, and Practice

Forest Conservation in the Anthropocene: Science, Policy, and Practice

Forest Conservation in the Anthropocene provides thought-provoking insight into the ongoing environmental crises that climate change is generating and raises critical questions about how public and private land managers in North America will adapt to the climatological disruptions that are already transforming the ecological structures of these forests.

In this pathbreaking anthology, a team of leading environmental researchers probes the central dilemmas that ecologists, forest land managers, state and federal agencies, and grassroots organizations are confronting—and will continue to confront—in the coming century. Each chapter examines strategies that are currently being tested across the country as scientists, citizen-scientists, policy makers, academics, and activists work to grasp their options and opportunities for a future that will be shaped by ongoing environmental upheaval.

Successful adaptation to the challenges of climate change requires a transdisciplinary perspective. *Forest Conservation in the Anthropocene* provides a compelling set of arguments and case studies that underscores the need for innovative policies and energetic actions.
